How to Launch Cloud POS Mobile

1. Open the Camera app (iOS) or Expo Go app (iOS / Android)
2. Scan the QR code at the mobile launch page — app loads instantly, no App Store install required
3. For a signed native build with full NFC Tap to Pay support, build via EAS: `npx eas-cli build -p ios --profile production`

1. Executive Summary

Cloud POS Mobile — Next-Generation Point-of-Sale Platform

Cloud POS Mobile is a cross-platform Expo (React Native) mobile application delivering native iOS and Android performance for tableside ordering, mobile checkout, customer management, and real-time business operations. It is the mobile companion to the Cloud-PoS web back-office, sharing a live PostgreSQL database and REST API layer.

Core Value Propositions

NFC Tap to Pay on iPhone

Customers tap their contactless card, Apple Pay, or Apple Watch directly on the iPhone — no external card reader required. Uses iOS NFC Tag APDU entitlement (com.apple.developer.nfc.readersession.formats: TAG).

Real-Time Cloud Sync

All orders, kitchen tickets, inventory, and customer records sync instantly between the mobile app and the Cloud-PoS web back-office through a shared PostgreSQL database.

Multi-Industry Platform

Three fully distinct operating modes — Restaurant, Retail, and Service — each with tailored navigation, screens, and workflows. Switch modes in Settings to instantly reconfigure the entire app.

4-Tier Loyalty Program

Built-in Bronze ! Silver ! Gold ! Platinum loyalty system. Points accumulate automatically with every transaction. Tier badges display on customer profiles and sync with Cloud-PoS.

Quotes & Invoices

Full document workflow for service and retail — create estimates, convert to invoices, email payment portal links, and track paid/overdue status with configurable Net payment terms.

Kitchen Display System

Live kitchen ticket queue (New ! Preparing ! Ready ! Served) with elapsed timers, guest counts, and item-level modifier notes — purpose-built for back-of-house staff.

Appointment Scheduling

Full calendar booking for service businesses — staff assignment, duration tracking, and status lifecycle management (Pending ! Confirmed ! In-Progress ! Completed).

Elavon / Converge Payments

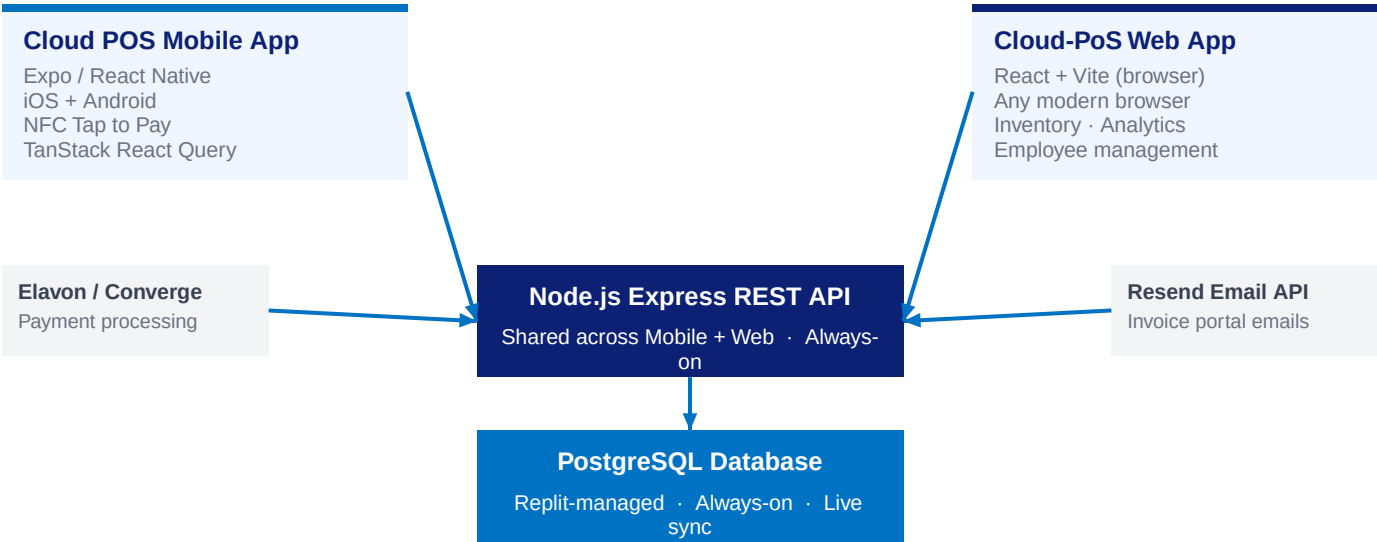

Native Elavon integration for credit card, debit, and cash transactions. Configurable tax rate, cash change calculation, and per-transaction payment receipt.

iOS + Android Native Platforms	14+ Feature Modules	4 Tiers Loyalty Program	3 Modes Business Types
--	-------------------------------	-----------------------------------	----------------------------------

2. System Architecture & Data Flow

Shared API, PostgreSQL database, and cloud hosting on Replit

The mobile app and Cloud-PoS web back-office share a single Express REST API and a Replit-managed PostgreSQL database. All data is live and synchronized across both clients in real time — no polling delays or manual refresh required on any screen.

Data Flow Summary

Data Flow	Description
New Order !' Kitchen	Order created !' DB !' Kitchen ticket auto-generated !' KDS updates within 8 seconds.
Payment !' Loyalty	Payment complete !' Loyalty points credited !' Tier evaluated !' Customer record updated.
Mobile !' Web Sync	Orders, customers, menu items read from shared DB — perfectly in sync between both clients.
Customer Sync	One-tap import from Cloud-PoS CRM !' merges points and visit data by max(local, cloud).
Quote !' Invoice	Quote accepted !' converts to invoice !' payment link emailed via Resend !' status tracked.
Settings !' App	Industry mode change in Settings instantly reconfigures navigation, labels, and feature set.

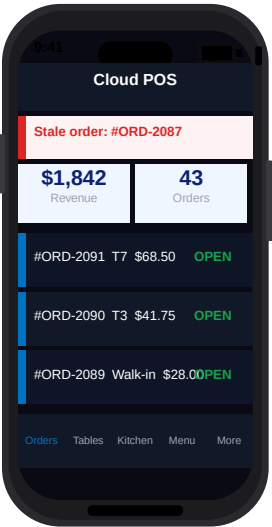

Technology Stack

iOS & Android Native UI	Expo React Native · Expo Router (file-based nav) · React Native Reanimated 3
State & Data Layer	TanStack React Query · 30s stale time · Optimistic updates · Offline cache
API Server	Node.js + Express + TypeScript · Drizzle ORM · express-session
Database	PostgreSQL (Replit-managed) · 11+ tables · Shared across web and mobile
Platform & Distribution	Replit cloud (always-on) · EAS Build for signed iOS/Android binaries

3. Industry Modes

Restaurant · Retail · Service — one app, three complete operating configurations

Cloud POS Mobile adapts its entire interface, navigation, and feature set based on the selected Industry Mode in Settings. Switching modes takes effect immediately without restarting. Each mode enables the appropriate screens, reconfigures tab labels, and adjusts product category suggestions.

- Invoice generation for B2B and wholesale orders
- Contactless card and Apple Pay checkout from mobile
- Cash tendered with quick-amount shortcuts and change display

4.1 Orders & Live Dashboard

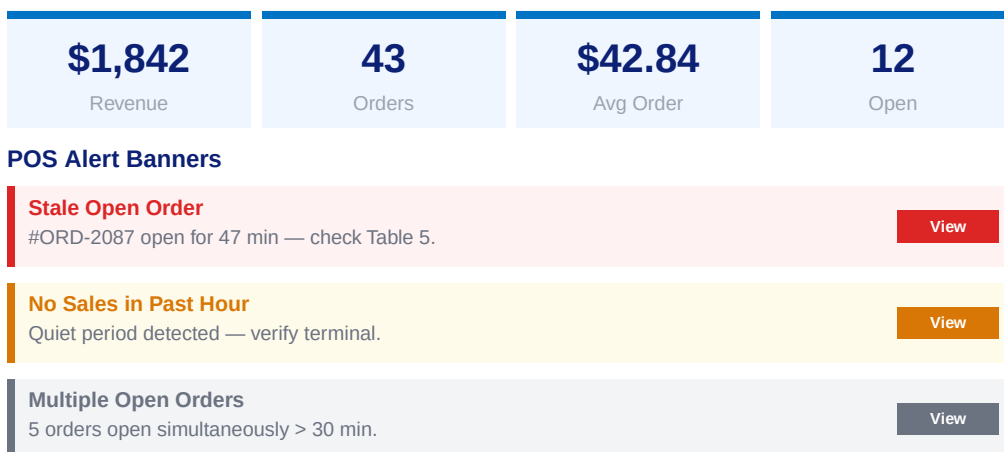

Real-time order queue, KPI cards, and intelligent operational alerts

Page 7

Orders Tab

The Orders tab is the app's home screen — a live feed of all active orders with KPI stat cards, POS alert banners, and a quick new-order shortcut. Data refreshes automatically every 30 seconds and supports pull-to-refresh.

Orders Screen Features

- Real-time order list with automatic 30-second background refresh — no manual action needed
- Pull-to-refresh gesture for immediate manual data sync at any time
- Tap any order card to open full order detail — edit items, void, or proceed to checkout
- + button launches cart builder with full category-filtered menu access

- Status badges: Open (green) · Paid (gray) · Voided (red) — instantly scannable
- POS alert banners auto-dismiss when the underlying condition resolves
- Dark mode support — all colours adapt to iOS/Android system appearance setting
- Haptic feedback on tap for tactile confirmation without audio disruption

4.2 New Order Flow & Cart Builder

Touch-optimised menu browsing, cart management, and modifier selection

The New Order screen is a full-screen cart builder with category-filtered menu browsing. Staff add items, adjust quantities, apply modifiers, add notes, optionally assign a table, and proceed to checkout — all in a single fluid flow.

Order Creation Flow

Sample Menu (Restaurant Mode)

Item	Category	Price	Pricing Type
Ø<βT House Burger	Mains	\$14.99	Fixed
Ø>ÝW Caesar Salad	Salads	\$11.50	Fixed
Ø<βUM Margherita Pizza	Mains	\$16.50	Fixed
Ø<βZ Craft Beer (IPA)	Beverages	\$7.00	Per Unit
Ø<βW House Wine	Beverages	\$9.00	Per Unit
Ø<βpTiramisu	Desserts	\$8.00	Fixed
& Coffee	Beverages	\$4.00	Fixed
Ø<βk Chocolate Lava Cake	Desserts	\$9.50	Fixed

Modifier System

Tapping a cart item opens the Modifier Sheet — a native bottom sheet where staff select pre-configured modifier groups and add a free-text kitchen note. Modifier selections print on the kitchen ticket automatically.

- Cooking Temp:** Rare · Medium-Rare · Medium · Well-Done
- Add-ons:** Extra Cheese · Bacon · Avocado · Extra Sauce (+ price)
- Dietary:** Gluten-Free · No Onion · Nut Allergy · Vegan
- Portion:** Half Portion (" \$2) · Full Portion · Double Portion
- Kitchen Note:** Free-text field — printed verbatim on the kitchen ticket

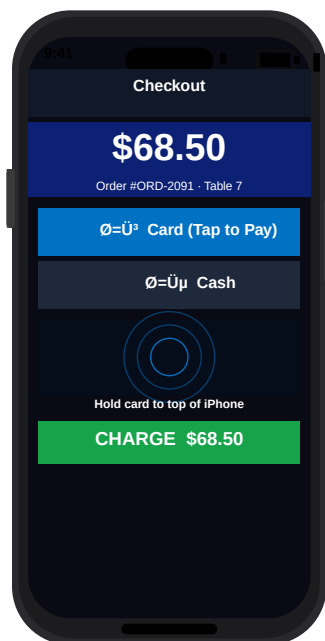

Cart Features

- Live subtotal, tax (8.875% default), and grand total update instantly as items are added or removed
- Quantity stepper per line item — tap to increment, swipe to remove entirely
- Per-item notes field (e.g. 'no cilantro') — notes flow through to the kitchen ticket
- Table number field — leave blank for a walk-in POS sale, or type a table number
- Charge button is disabled until at least one item is in the cart — prevents accidental empty orders

4.3 Checkout & Payments

NFC Tap to Pay · Cash with Change · Card · Elavon / Converge Integration

Page 10

Checkout Screen

The Checkout screen supports three payment methods — NFC Tap to Pay, Credit/Debit Card, and Cash. All payments process through Elavon/Converge and create a permanent transaction record.

NFC Tap to Pay — Step by Step

- 1 Open Checkout**
Tap Charge. Select Card. iPhone activates NFC.
- 2 NFC Session**
iOS NFC overlay appears — the iPhone IS the reader.
- 3 Customer Taps**
Card, Apple Pay, or Apple Watch touched to top of iPhone.
- 4 Tag Detected**
ISO 14443 Tag APDU read. Haptic confirms detection.
- 5 Processing**
Transaction sent to Elavon/Converge. < 2 seconds.
- 6 Approved**
Green checkmark + haptic. Order marked Paid instantly.

Accepted Contactless Payment Types

Payment Type	Technical Detail
Visa Contactless	AID: A0000000031010 / A0000000032010
Mastercard Contactless	AID: A0000000041010
American Express	AID: A000000002501
Discover	AID: A0000001523010
Apple Pay	Uses card's AID via the Secure Element — same NFC session
Apple Watch	Same protocol as iPhone Apple Pay

Cash Payment with Change Calculation

Amount Tendered

\$80.00

Quick amounts:

\$20

\$40

\$60

\$80

Exact

Change Due: **\$11.50**

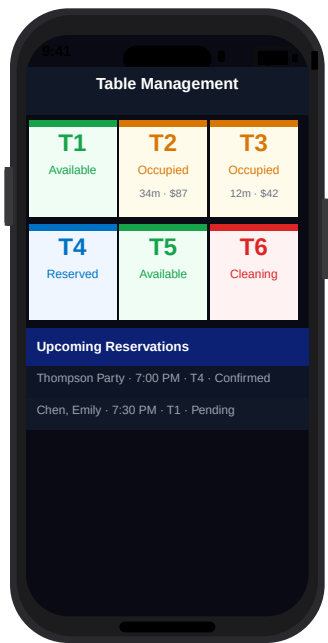

Cash payments show a full-screen tendered amount entry with quick-amount shortcuts. Change due is calculated and displayed prominently before confirming. Cash transactions are logged separately for end-of-day reconciliation.

Payment Success Screen

- Full-screen success state shows: order number, total charged, payment method label, and change due (cash)
- Contactless payments labeled 'Contactless' on receipt and in order history
- Order status changes to Paid — removed from active queue immediately
- Loyalty points credited to customer account if the order was customer-linked
- Kitchen ticket status updated to reflect payment completion

4.4 Table Management & Reservations

Visual floor plan · Real-time status · Integrated reservation calendar

Tables Screen

The Tables tab provides a real-time visual floor plan organized by section. Staff see occupancy status, time elapsed since seating, running order total, and guest count at a glance.

Table Status Types

Available	Empty, ready to be seated
Occupied	Guests seated — shows time & running total
Reserved	Advance booking holds the table
Cleaning	Turned over — being cleaned before re-seating

Sample Floor Plan

Main Dining

T1 Available	T2 Occupied 34m · \$88	T3 Occupied 12m · \$42	T4 Reserved	T5 Available	T6 Cleaning
------------------------------------	---	---	-----------------------------------	------------------------------------	-----------------------------------

Bar

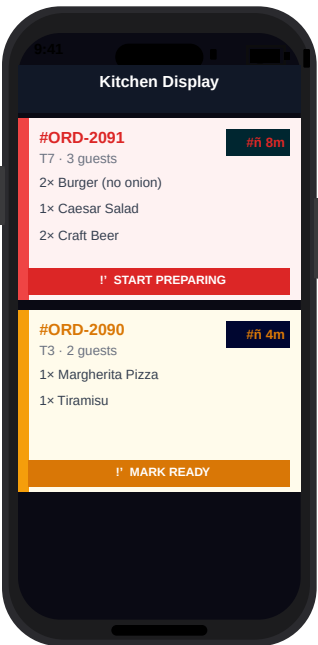

B1 Occupied 8m · \$28	B2 Available	B3 Occupied 5m · \$14
--	------------------------------------	--

Reservation System

Guest	Date	Time	Party	Table	Status
Thompson Party	Mar 22, 2026	7:00 PM	6	T4	Confirmed
Chen, Emily	Mar 22, 2026	7:30 PM	2	T1	Pending
Rivera Group	Mar 23, 2026	6:00 PM	8	T7	Confirmed
Williams, Marcus	Mar 24, 2026	7:00 PM	3	B2	Confirmed

4.5 Kitchen Display System (KDS)

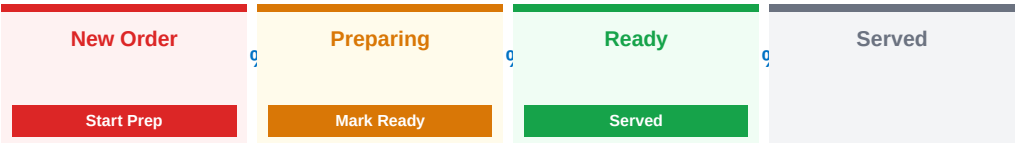

Live ticket queue · Status progression · Elapsed timers · Modifier notes

Kitchen Display

The Kitchen tab is a purpose-built kitchen-facing display. All orders submitted from the mobile app or Cloud-PoS web POS appear here within 8 seconds. Kitchen staff advance tickets through four stages — each tap records a timestamp.

Ticket Status Flow

Sample Kitchen Tickets

#ORD-2091

#ñ 8m

Table 7 · 3 guests

2× House Burger (1× no onion)

1× Caesar Salad (dressing on side)

2× Craft Beer (IPA)

#ORD-2090

#ñ 4m

Table 3 · 2 guests

1× Margherita Pizza (extra basil)

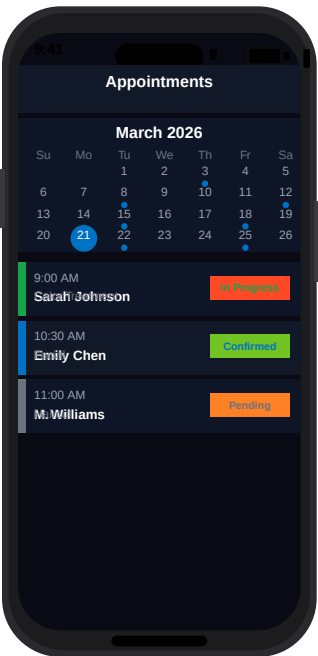

1× Tiramisu

KDS Features

- Tickets appear within 8 seconds of order creation — auto-refresh polling every 15 seconds
- Tickets grouped by status: New · Preparing · Ready — section headers keep the queue organized
- Elapsed timer updates every 30 seconds — shifts from green to amber to red as time passes
- Table number and guest count shown prominently so servers know which order to collect
- Item-level modifier notes appear below each line item — kitchen sees full context
- One-tap status advance: each tap records a timestamp for kitchen performance reporting
- Served tickets move to a secondary 'Done' section, keeping the active queue clear

4.6 Appointments (Service Mode)

Full calendar booking · Staff assignment · Status lifecycle · Duration tracking

Appointments

Available in Service Mode, the Appointments tab provides a complete booking management system. A swipe-able calendar shows appointment density by date. Staff create, confirm, and progress appointments through their full lifecycle with staff assignment and service duration tracking.

Status Lifecycle

Pending	New booking awaiting staff confirmation
Confirmed	Staff confirmed — client notified
In Progress	Service underway — client in chair
Completed	Service done — ready for payment
No Show	Client did not arrive — flagged for record

Sample Appointment Schedule — March 21, 2026

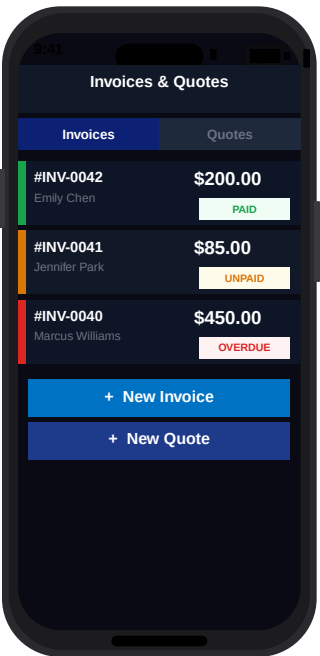

Time	Client	Service	Duration	Staff	Status
9:00 AM	Sarah Johnson	Color Treatment	90 min	Jordan Lee	In Progress
9:30 AM	Emily Chen	Manicure	30 min	Morgan Scott	Confirmed
10:30 AM	Jennifer Park	Facial	60 min	Taylor Kim	Confirmed
11:00 AM	Marcus Williams	Haircut	45 min	Alex Rivera	Pending
1:00 PM	Robert Garcia	Massage (60 min)	60 min	Jordan Lee	Pending

Appointment Features

- Month-view calendar with dot indicators on booked dates — swipe to change months
- Day view lists all appointments for a selected date in chronological order
- Staff assignment per booking pulled from the employee roster
- Duration slots in 30-minute increments from 8:00 AM to 6:00 PM
- Completed appointments link directly to a new order for payment processing
- No-show flag logs the client behaviour for future loyalty and reporting

4.7 Quotes & Invoices

Quote creation · Catalog browsing · Invoice conversion · Email payment links

Invoices Tab

The Invoices tab provides a complete document workflow for service and retail businesses. Create estimates (quotes), send them for client review, convert accepted quotes to invoices, and track payment status — all from the mobile app. Clients receive a payment portal link by email.

Document Workflow

Status Types

Quote Statuses

- Draft
- Sent
- Accepted
- Declined

Invoice Statuses

- Unpaid
- Paid
- Overdue
- Voided

Payment Terms

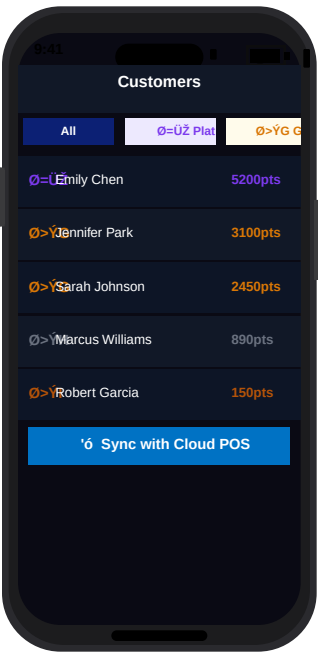

Term	Days	Best For
Due on Receipt	0 days	In-person service completion, immediate payment
Net 7	7 days	Frequent clients, small invoices
Net 15	15 days	Regular B2B clients
Net 30	30 days	Standard commercial invoicing
Net 45	45 days	Larger projects, wholesale
Net 60	60 days	Enterprise clients, large volume contracts

Email Portal

- Payment portal hosted at: <https://cloud-po-s-wilcoxisaac.replit.app/api/portal> — always live
- Portal link included in every invoice and quote email — clients pay via browser, no account needed
- Overdue detection is automatic — any invoice past its due date with 'unpaid' status is flagged red
- Native Share Sheet: tap Share on any invoice to share the portal link via iMessage, email, or any app
- Email delivery via Resend API — PORTAL_BASE_URL and FROM_EMAIL configured per deployment

4.8 Customer CRM & Loyalty Program

4-tier loyalty · Cloud POS sync · Visit history · Purchase analytics

Customers Tab

The Customers tab is a full CRM with a built-in 4-tier loyalty program. Customer records track visit history, lifetime spend, loyalty points, top purchased items, and recent invoices. One-tap sync imports all customers from Cloud-PoS, merging data intelligently.

Loyalty Tier Thresholds

Ø>ÝI Bronze 0–499 pts	Ø>ÝH Silver 500–1,999 pts	Ø>ÝG Gold 2,000–4,999 pts	Ø=ÜŽ Platinum 5,000–"
-----------------------------	---------------------------------	---------------------------------	-----------------------------

Customer Roster

Customer	Tier	Visits	Points	Last Visit	Notes
Emily Chen	Ø=ÜŽ Platinum	24	5,200	Mar 19, 2026	Prefers oat milk
Jennifer Park	Ø>ÝG Gold	18	3,100	Mar 18, 2026	Allergy: nuts
Sarah Johnson	Ø>ÝG Gold	15	2,450	Mar 15, 2026	VIP regular
Marcus Williams	Ø>ÝH Silver	8	890	Mar 12, 2026	
Robert Garcia	Ø>ÝI Bronze	3	150	Mar 8, 2026	New customer

Cloud POS Sync

- One-tap sync fetches all records from <https://cloud-po-s-wilcoxisaac.replit.app/api/customers>
- Match priority: Cloud POS ID != email address != name — prevents duplicate records
- Points merged by $\max(\text{local}, \text{cloud})$ — customers never lose points during a sync
- Visit count merged by $\max(\text{local}, \text{cloud})$ — same strategy ensures no data loss
- Last visit date merged by taking the most recent date from either system
- Sync timestamp displayed below the customer count so staff know when data is current

4.9 Menu / Product Catalog Management

Full CRUD · Category organisation · Multi-industry pricing · SKU tracking

The Menu tab (labelled 'Menu', 'Catalog', or 'Services' depending on industry mode) provides full product management. Staff add, edit, and remove items, set pricing types, assign categories, attach emoji icons, and manage SKUs — all from the mobile app, synced live to Cloud-PoS.

Product Fields

Field	Description
Name	Display name on menu grid and order tickets
Description	Optional subtitle — shown in product detail and on quotes/invoices
Price	Numeric USD price — interpreted per pricing type
Category	Used for tab filtering on the order screen — industry-specific suggestions provided
SKU	Stock-keeping unit identifier — optional, used for inventory cross-reference
Emoji	Visual icon on menu grid — selected from a curated 20-emoji palette
Pricing Type	Fixed · Hourly (Service) · By Weight (Restaurant) · Per Unit (Retail)

Pricing Types by Industry

🍽️ Restaurant	
Fixed	\$14.99 each
By Weight	\$32.00/lb
Per Unit	\$7.00/glass
💇 Service	
Fixed	\$45.00 flat
Hourly	\$80.00/hr
🛍️ Retail	
Fixed	\$29.99 each
Per Unit	\$12.00/bag

Category Suggestions by Mode

🍽️ Restaurant	Appetizers · Mains · Desserts · Beverages · Specials · Sides
💇 Service	Hair · Nails · Massage · Skin · Other Services
🛍️ Retail	Clothing · Accessories · Electronics · Food & Drink · Other

4.10 Order History

Complete transaction log · Status filtering · Full receipt detail

The History tab provides a scrollable log of all completed transactions — Paid and Voided. Filter by status, tap any order to view the full receipt with line items, modifiers, payment method, timestamps, and tax breakdown.

History Card Layout

#ORD-2089 Mar 21, 2026 · 1:42 PM 3 items · Contactless	\$68.50	PAID
#ORD-2088 Mar 21, 2026 · 12:11 PM 2 items · Cash	\$28.00	PAID
#ORD-2087 Mar 21, 2026 · 11:55 AM 5 items · Card	\$94.25	PAID
#ORD-2085 Mar 21, 2026 · 10:22 AM 1 item	\$14.99	VOIDED
#ORD-2083 Mar 20, 2026 · 7:38 PM 4 items · Contactless	\$112.00	PAID

Full Receipt Detail

Order #ORD-2089		PAID · Contactless
Table 7 · Mar 21, 2026 · 1:42 PM		
House Burger × 2 (no onion)		\$29.98
Caesar Salad × 1 (dressing on side)		\$11.50
Craft Beer × 2		\$14.00
Subtotal		\$55.48
Tax (8.875%)		\$4.92
Total		\$60.40

4.11 Back Office (Cloud-PoS Integration)

Embedded live web view of the full Cloud-PoS management console

The Back Office tab embeds the full Cloud-PoS web application directly inside the mobile app via a native WebView. It provides the complete management suite — inventory, analytics, employee management, detailed reporting, and all settings — without leaving the app.

Embedded Back-Office Modules

URL Path	Module	Description
/dashboard	Dashboard	Live KPIs, sales charts, top sellers, alerts, recent transactions
/pos	POS Terminal	Web-based POS — full sales terminal accessible from mobile
/inventory	Inventory	SKU-level stock tracking, low/critical alerts, supplier management
/customers	Customer CRM	Full CRM with loyalty tracking and tier management
/employees	Employee Mgmt	Staff roster, live clock-in, payroll estimates, sales attribution
/analytics	Analytics	7-month revenue trend, category breakdown, export reports
/tables	Table Management	Web floor plan, table status, and reservations
/kitchen	Kitchen Display	Web KDS for kitchen staff with ticket management
/orders	Orders History	Complete order log with date, method, and table filters
/menu	Menu Management	Add/edit/remove menu items via web interface
/settings	Settings	7 sections: Business, Payments, Tax, Notifications, Security, Display, Hardware

Industry Mode Sync

When the Back Office tab gains focus, the app reads the industry setting from the Cloud-PoS API. If the web admin has changed the business type, the mobile app automatically switches modes — reconfiguring its navigation and feature set to match.

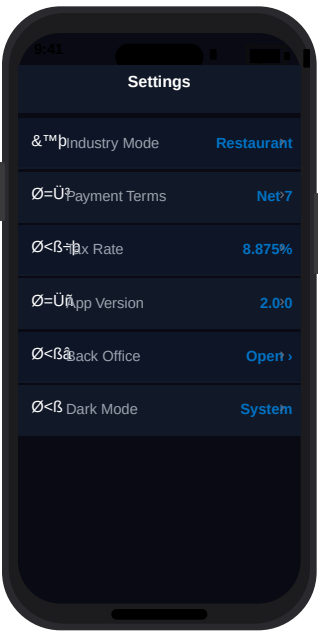

- Industry sync polls every 8 seconds while the Back Office tab is active
- 45-second stale threshold — webview reloads automatically if the tab was backgrounded
- Error state with retry button if the Cloud-PoS server is temporarily unreachable
- Back Office URL: <https://cloud-po-s-wilcoxisaac.replit.app> — always-on Replit deployment

Cloud-PoS Key Capabilities (accessible via Back Office)

Dashboard:	\$761 today's revenue · 19 transactions · 4 covers · \$40 avg order — all live
POS Terminal:	Category-filtered menu grid · live cart · one-tap Elavon checkout
Inventory:	10 items tracked · 1 critical (House Wine — 3 bottles) · 3 low stock · \$508 total value
Analytics:	\$31.2K March revenue · 441 transactions · 7-month trend · category breakdown
Employees:	5 staff · 4 clocked in · 162h this week · \$2,790 weekly payroll estimate
Settings:	7 tabs: Business Info · Elavon Payments · Tax & Receipts · Notifications · Security · Display · Hardware

4.12 Settings & Configuration

Industry mode · Payment terms · Tax rate · App version · Elavon integration

Settings Screen

Settings provides configuration for all mobile app behaviour. Settings persist locally via AsyncStorage and sync relevant values with the Cloud-PoS API. Industry mode changes reconfigure the entire app navigation and feature set without restarting.

Settings Reference		
Setting	Options	Description
Industry Mode	Restaurant · Retail · Service	Reconfigures all tabs, labels, and feature availability instantly
Payment Terms	Net 0/7/15/30/45/60	Default applied to new invoices and quotes
Tax Rate	8.875% (default)	Applied at checkout — matches Cloud-PoS server config
NFC / Tap to Pay	iOS native (entitlement)	Uses Apple NFC Tag APDU — reads contactless cards on iPhone
Elavon Integration	Converge gateway	Credentials set via environment variables on the API server
Dark Mode	Follows iOS/Android system	All screens have full light and dark mode support

Server Environment Variables

Variable	Purpose
DATABASE_URL	PostgreSQL connection string (Replit-managed)
SESSION_SECRET	Express session signing secret
RESEND_API_KEY	Resend email API key for invoice/quote delivery
FROM_EMAIL	Sender address for all outbound emails
PORTAL_BASE_URL	Production URL for payment portal links in emails (set to https://cloud-po-s-wilcoxisaac.replit.app)
CONVERGE_MERCHANT_ID	Elavon/Converge merchant identifier
CONVERGE_USER_ID	Elavon/Converge API user ID
CONVERGE_PIN	Elavon/Converge API PIN
CONVERGE_ENV	'demo' or 'live' — controls payment processing environment

5. Feature Comparison Matrix

Cloud POS Mobile vs Cloud-PoS Web — side-by-side capability reference

Page 27

Side-by-side comparison of all capabilities across the Cloud POS Mobile app and the Cloud-PoS Web back-office. Both share the same API server and PostgreSQL database.

Feature	Mobile App	Cloud-PoS Web	Notes
SALES & ORDERING			
Mobile POS / New Order	'	'	Both apps support full order creation
Category-filtered menu	'	'	Restaurant, Retail, Service categories
Live cart with tax calc	'	'	8.875% default, configurable
NFC Tap to Pay (iPhone)	'	—	iOS NFC Tag APDU entitlement
Credit / Debit card	'	'	Payment Convergence gateway integration
Cash + change calculation	'	'	Quick-amount shortcuts on mobile
Table assignment per order	'	'	Synced in real time
Tableside ordering	'	—	Mobile-exclusive capability
Item modifiers & notes	'	'	Modifier sheet on mobile
KITCHEN & TABLES			
Kitchen Display System	'	'	Both mobile and web versions live
Table floor plan	'	'	Sections: Main, Bar, Patio, Private
Reservation calendar	'	'	Confirm / seat / no-show tracking
APPOINTMENTS & INVOICES			
Appointment scheduling	'	—	Service mode, mobile-exclusive
Quote creation & sending	'	—	Mobile-exclusive document workflow
Invoice creation & tracking	'	—	Mobile-exclusive document workflow
Email payment portal links	'	—	Via Resend + PORTAL_BASE_URL
Net payment terms	'	—	Configurable per invoice/quote
CUSTOMERS & LOYALTY			
Customer profiles (CRM)	'	'	Full CRM on both platforms
4-tier loyalty program	'	'	Bronze / Silver / Gold / Platinum
Cloud POS sync (one-tap)	'	—	Mobile syncs from web CRM
Add customer at POS	'	'	During order or standalone
ANALYTICS & REPORTING			
Live KPI dashboard	' (Back Office)	'	Full analytics on web
7-month revenue trend	— (Back Office)	'	Web analytics module
Export reports	— (Back Office)	'	Web analytics module
MANAGEMENT			
Inventory (SKU-level)	— (Back Office)	'	Cost tracking + low/critical alerts

6. Technical Architecture & Integration

Reference

Event hooks · API endpoints · EAS build configuration

Key npm Packages

Package	Version	Purpose
expo	~53.0.9	Core Expo SDK — native module bridge, dev server, EAS build
expo-router	~4.0.17	File-based URL-driven navigation for React Native
@tanstack/react-query	^5.74.4	Server state — caching, background refresh, optimistic updates
react-native-reanimated	~3.16.7	High-performance animations running on the UI thread
react-native-nfc-manager	^3.17.2	iOS/Android NFC reader — IsoDep Tag APDU for contactless cards
expo-haptics	~14.0.1	Native haptic feedback — impact, selection, notification
@expo/vector-icons	^14.0.4	Feather + Ionicons icon sets
expo-font (Inter)	~13.0.4	Inter typeface — Regular, Medium, SemiBold, Bold weights
drizzle-orm	^0.41.0	Type-safe PostgreSQL ORM (API server)
express	^4.21.2	HTTP server framework (API server)
resend	^4.1.2	Email delivery for invoice and quote portal links

API Endpoint Reference

Method	Endpoint	Description
GET	/api/orders	All orders (filterable by status, date, table)
POST	/api/orders	Create new order with items
PATCH	/api/orders/:id	Update order items or status
POST	/api/orders/:id/pay	Process payment — updates status, credits loyalty points
GET	/api/products	All menu / catalog items
POST	/api/products	Create product (name, price, category, SKU, emoji)
PATCH	/api/products/:id	Update product
DELETE	/api/products/:id	Remove product
GET	/api/tables	All tables with current status and active order
PATCH	/api/tables/:id	Update table status
GET	/api/kitchen	Active kitchen tickets
PATCH	/api/kitchen/:id/status	Advance ticket status
GET	/api/customers	Customer list with tier info
POST	/api/customers/sync	Sync from Cloud-PoS — merge points and visit data
GET	/api/appointments	All appointments (filtered by date)
POST	/api/appointments	Create appointment
PATCH	/api/appointments/:id	Update status / staff / time
GET	/api/quotes	All quotes with status

GET

/api/invoices

All invoices with payment status

EAS Build Profiles

preview	APK	Android	Unsigned APK for direct device installation — ideal for staff onboarding and testing. No Play Store required.
production	AAB	Android	Signed Android App Bundle for Google Play Store submission.
production	IPA	iOS	Signed iOS build for App Store or TestFlight distribution. Includes NFC Tag APDU entitlement.

Build command:

```
npx eas-cli build -p android --profile preview
```
